

Catching bugs with Opera Dragonfly

AN OVERVIEW OF OPERA'S DEVELOPER TOOLS

Opera Developer Tools

[Overview](#) [Tools](#) [Events](#)

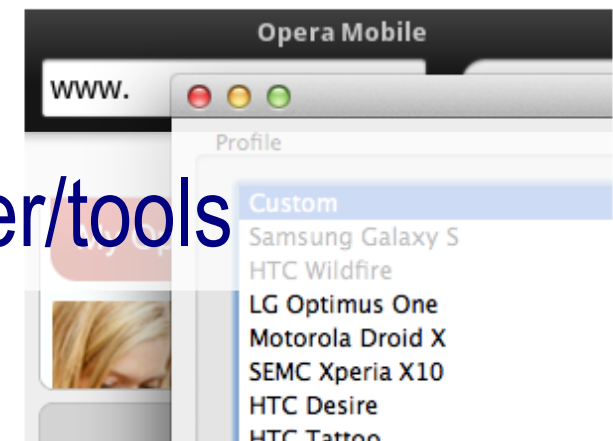

Develop and debug your web applications with **Opera Dragonfly** and the **Opera Mobile Emulator**.

Opera Dragonfly

Opera Mobile Emulator

Opera Dragonfly

Faster. Leaner. More refined. Even more powerful. Meet Opera Dragonfly — our fully-featured suite of developer tools, designed to make your job easier. It's just a right-click away. No install required.

[See what's new.](#) ➤

[Watch video](#)

Built-in

Opera Dragonfly is [built right into the browser](#) and updates automatically behind the scenes. Launch Opera Dragonfly with `Ctrl + Shift + I` on Windows and Linux, or `⌘ + ⌘ + I` on Mac. Alternatively, you can target a specific element by right-clicking in the page and selecting "Inspect Element".

Fully loaded

A full suite of tools puts you in control. Step through your code, manipulate the DOM, monitor network traffic, search for what you need, filter away what you don't, and a whole lot more. Whether you are a developer or a designer, Opera Dragonfly has the tools to keep you covered.

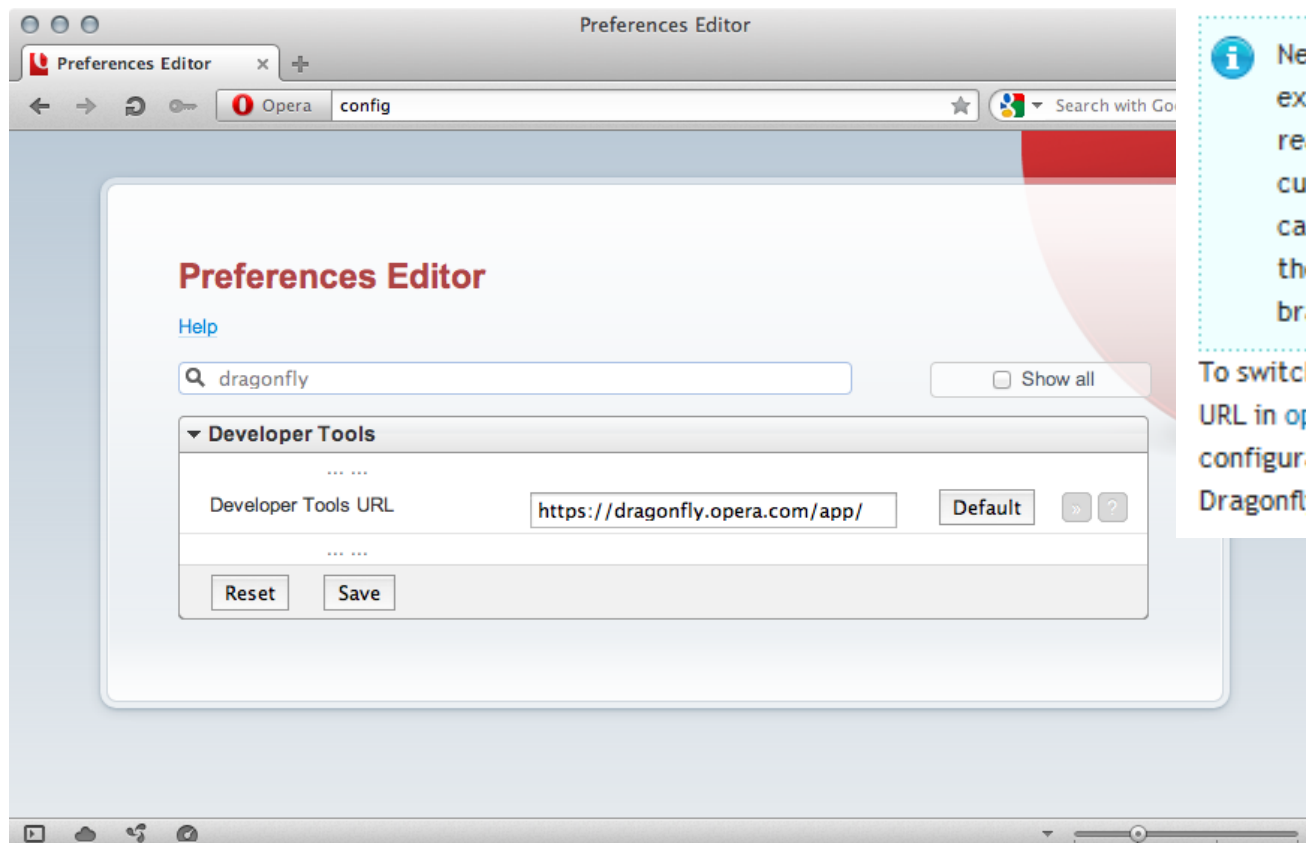

Cross-device

Develop for mobile, tablet or TV? Opera Dragonfly has that covered too. Remote debugging allows you to connect to the Opera browser on your device and to start debugging from your PC or Mac. All the features are available, so you don't need to compromise.

www.opera.com/dragonfly

Opera Dragonfly

- “HTML5 web application”
- uses application cache (needs one-time load)
- rapid release cycle with 3 release channels

Next builds

<https://dragonfly.opera.com/app/experimental/>

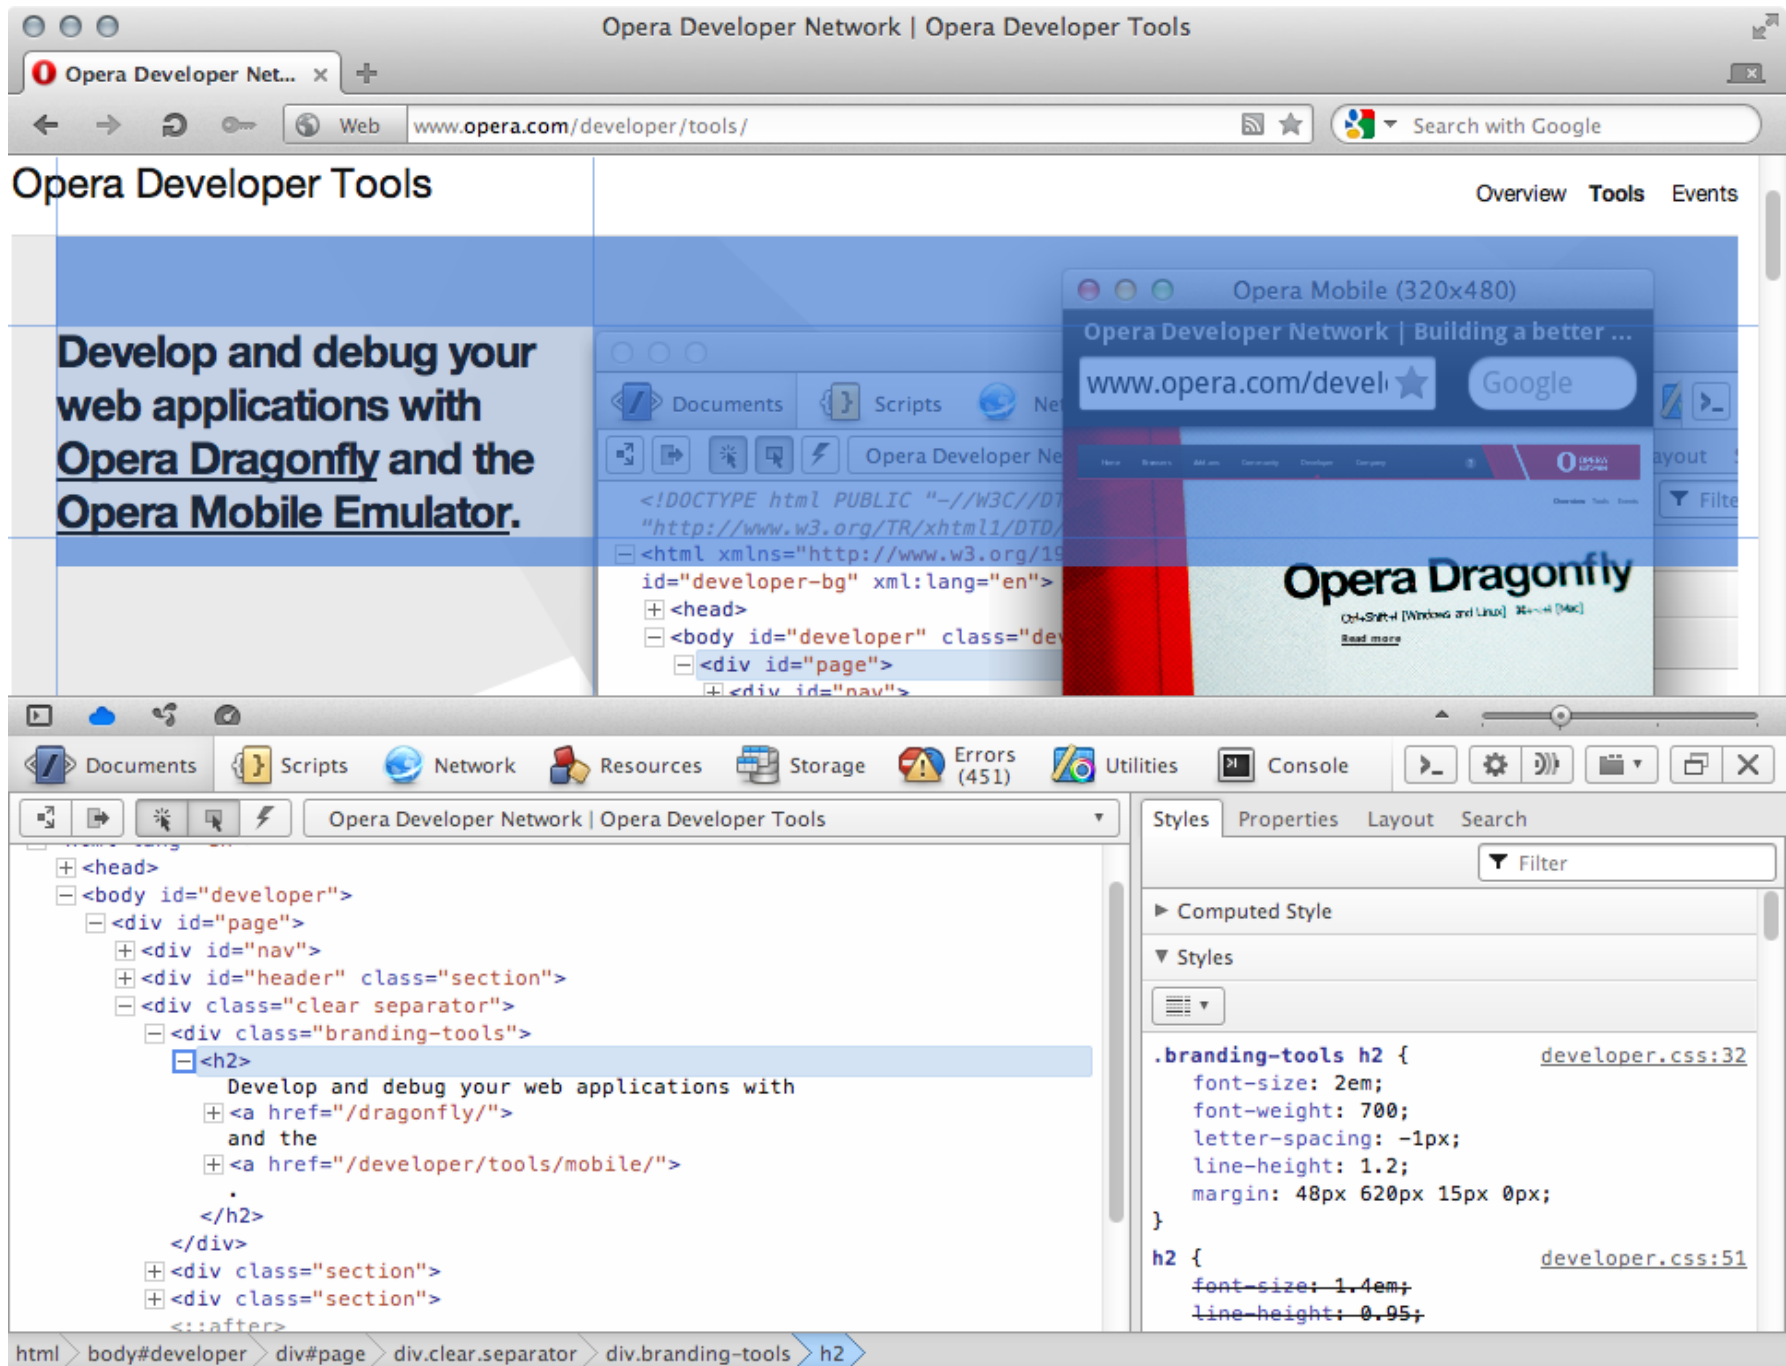

<https://dragonfly.opera.com/app/cutting-edge/>

<https://dragonfly.opera.com/app/>

i New features are added to the experimental branch as soon as they're ready. Once tested, they move to the cutting-edge branch as a release candidate. Unless any problems arise, they are then promoted to the stable branch.

To switch to these builds, enter the relevant URL in `opera:config#DeveloperTools`, save the configuration change and (re-)open Opera Dragonfly.

my.opera.com/dragonfly/blog

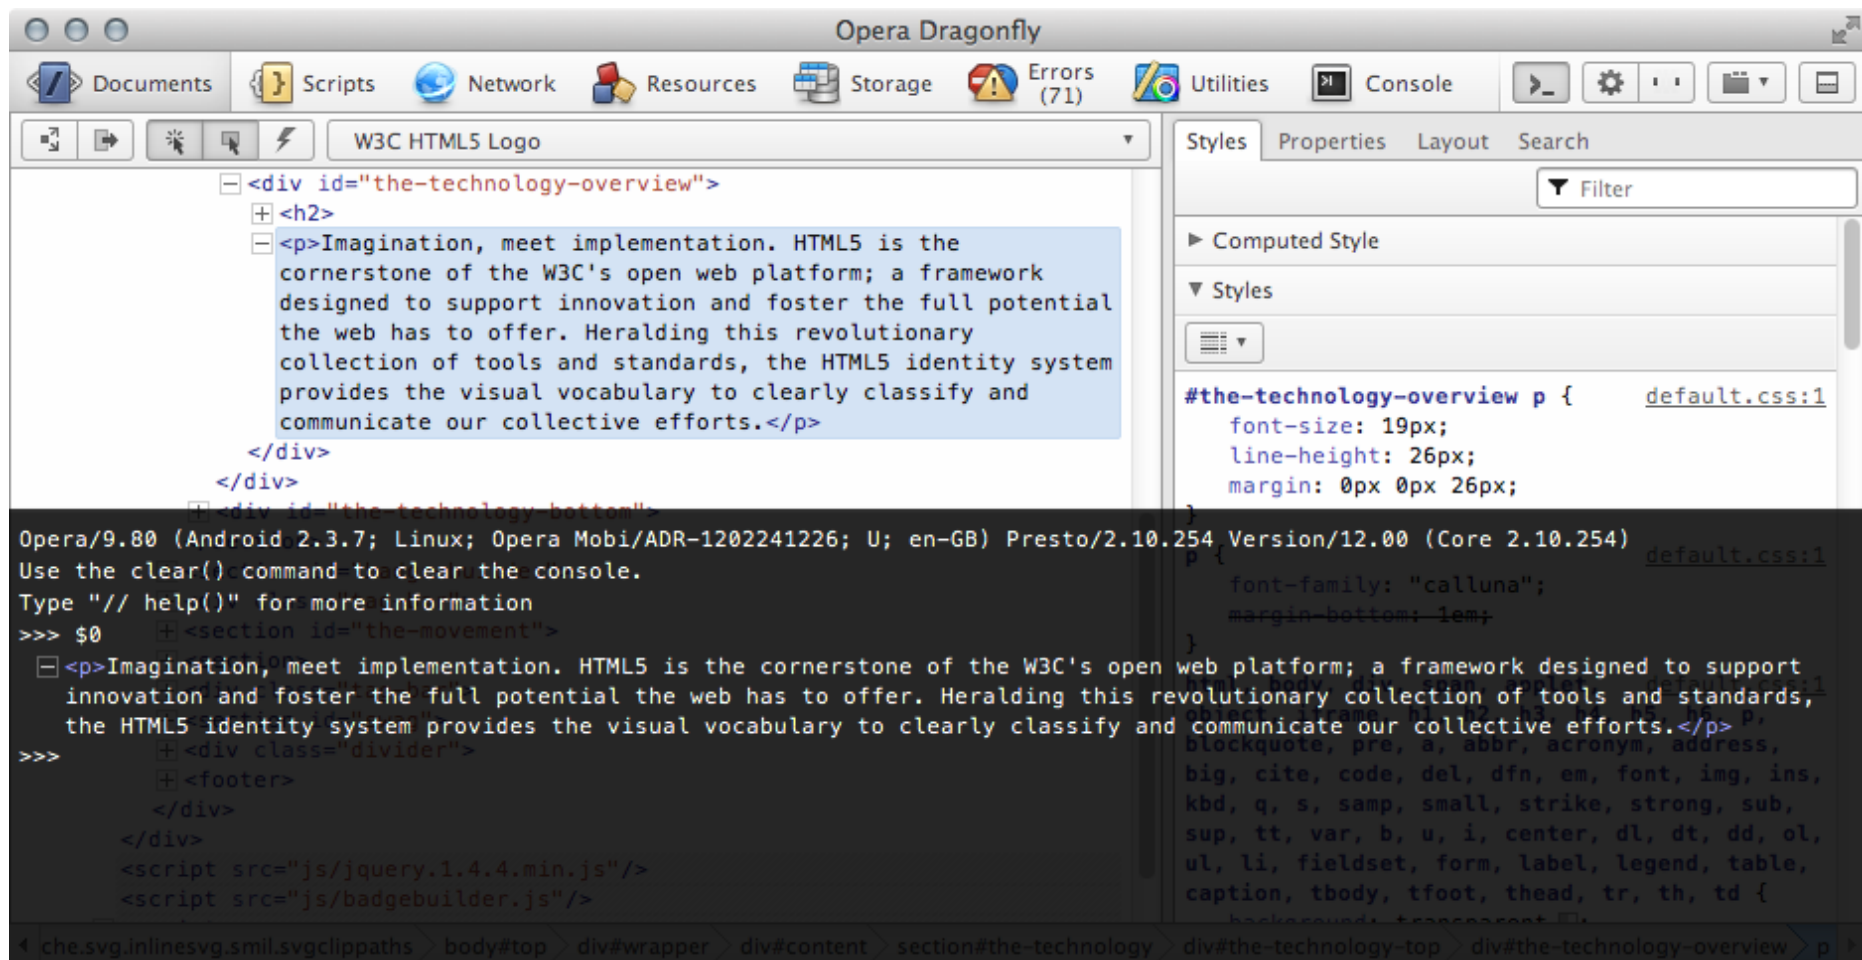

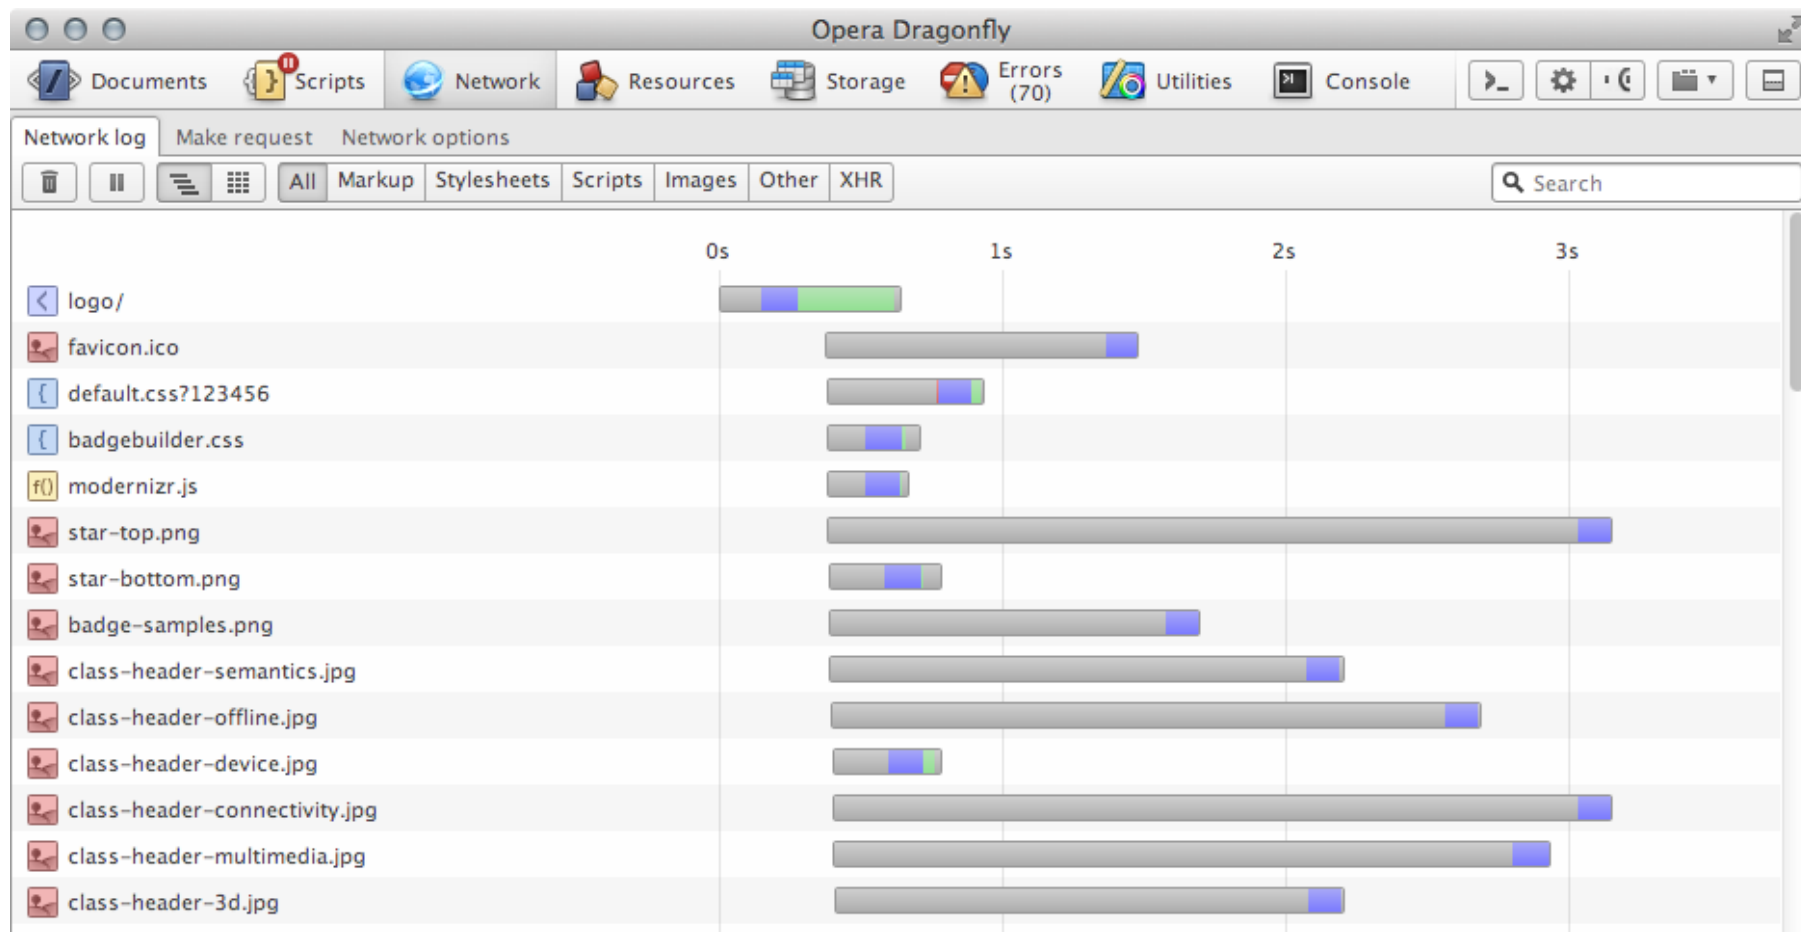

JavaScript **debugging**

- syntax errors are “simple” – throw errors
- more insidious: logic errors
- difficult to see what's going on inside script

What's **going on**?

- throwing alerts
- breakpoints – watches, stack, inspection
- console API

remote debugging

Remote debugging

- in Opera Dragonfly forever
- true remote debugging (look ma', no cables)

Developer luxury

Developing for mobile phones and tablets becomes a breeze. The emulator is super simple to install and lets you do serious mobile development from your desktop.

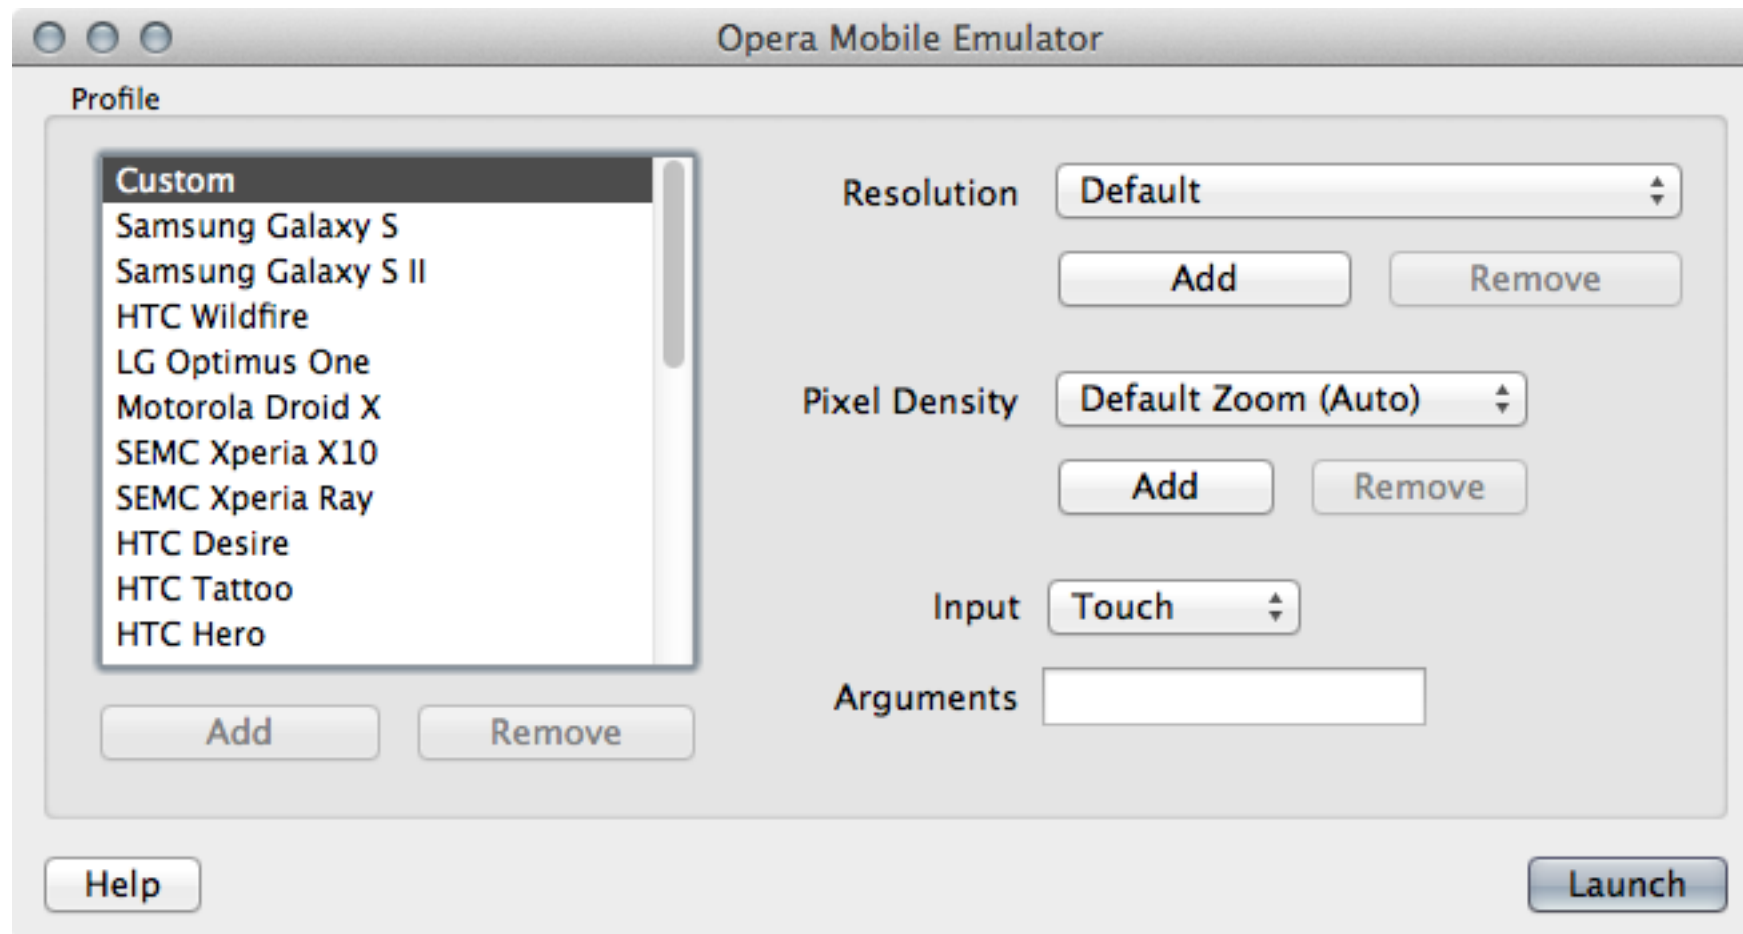

Launching pad

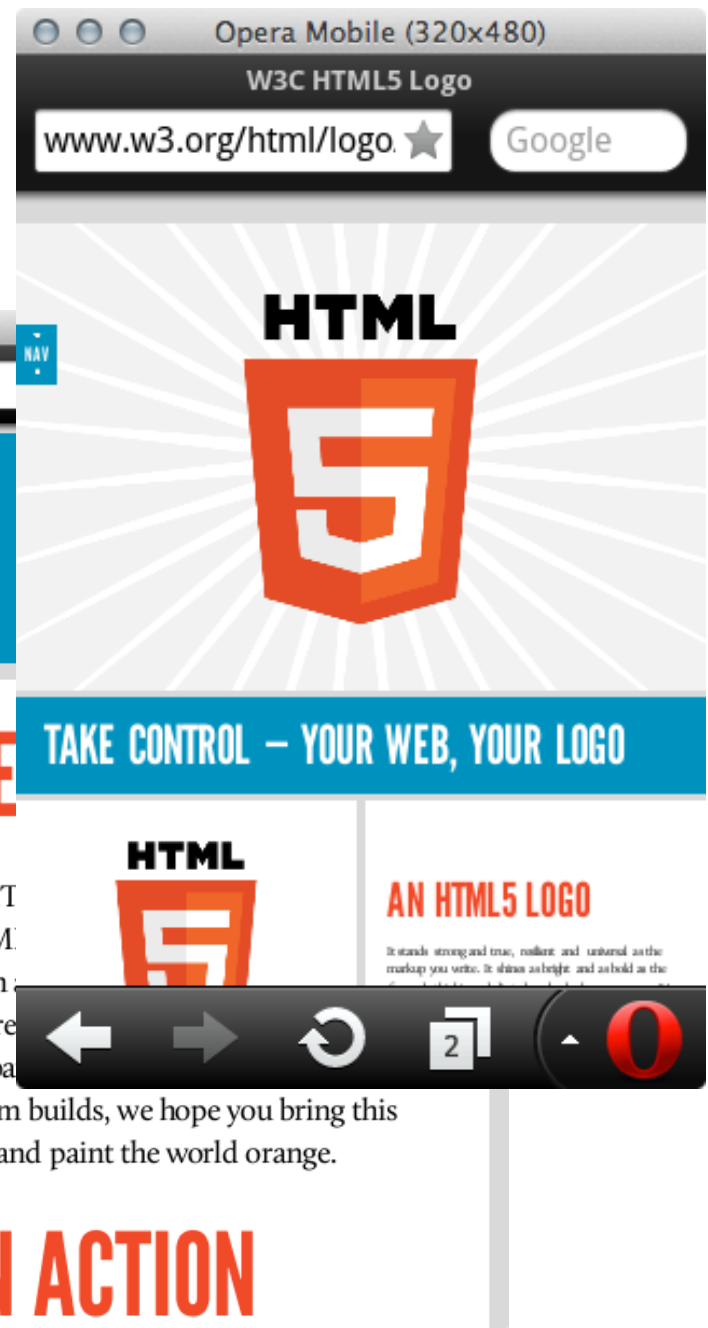

Use the launcher to spawn multiple Opera Mobile instances with a defined resolution, pixel density, input mode and more, and save your settings as profiles for future testing.

Connect with Opera Dragonfly

Connect the Opera Mobile Emulator to [Opera Dragonfly](https://www.opera.com/dragonfly/) and do your mobile CSS, JS and performance debugging, using a powerful developer toolkit.

THE MOVE

You're excited about HTML5. You've been enjoying the HTML5. You've been building it! As adoption grows, the community will find creative ways to use related technologies, spanning across different practices. As momentum builds, we hope you bring this logo along for the ride and paint the world orange.

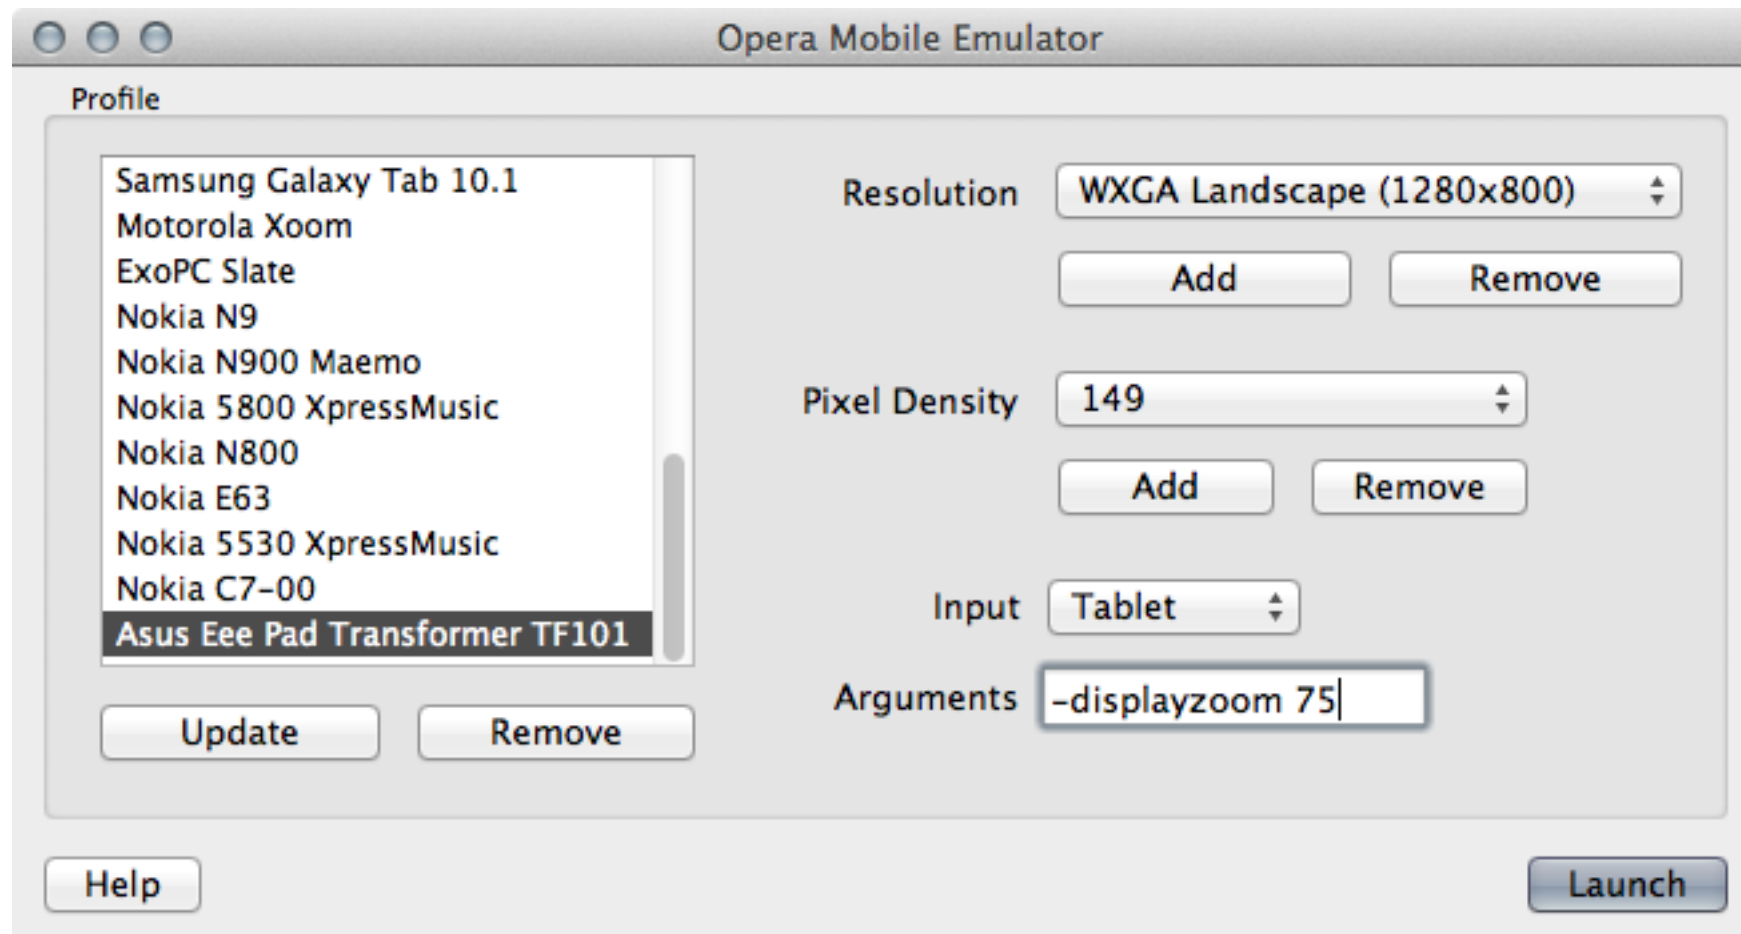

A LOGO IN ACTION

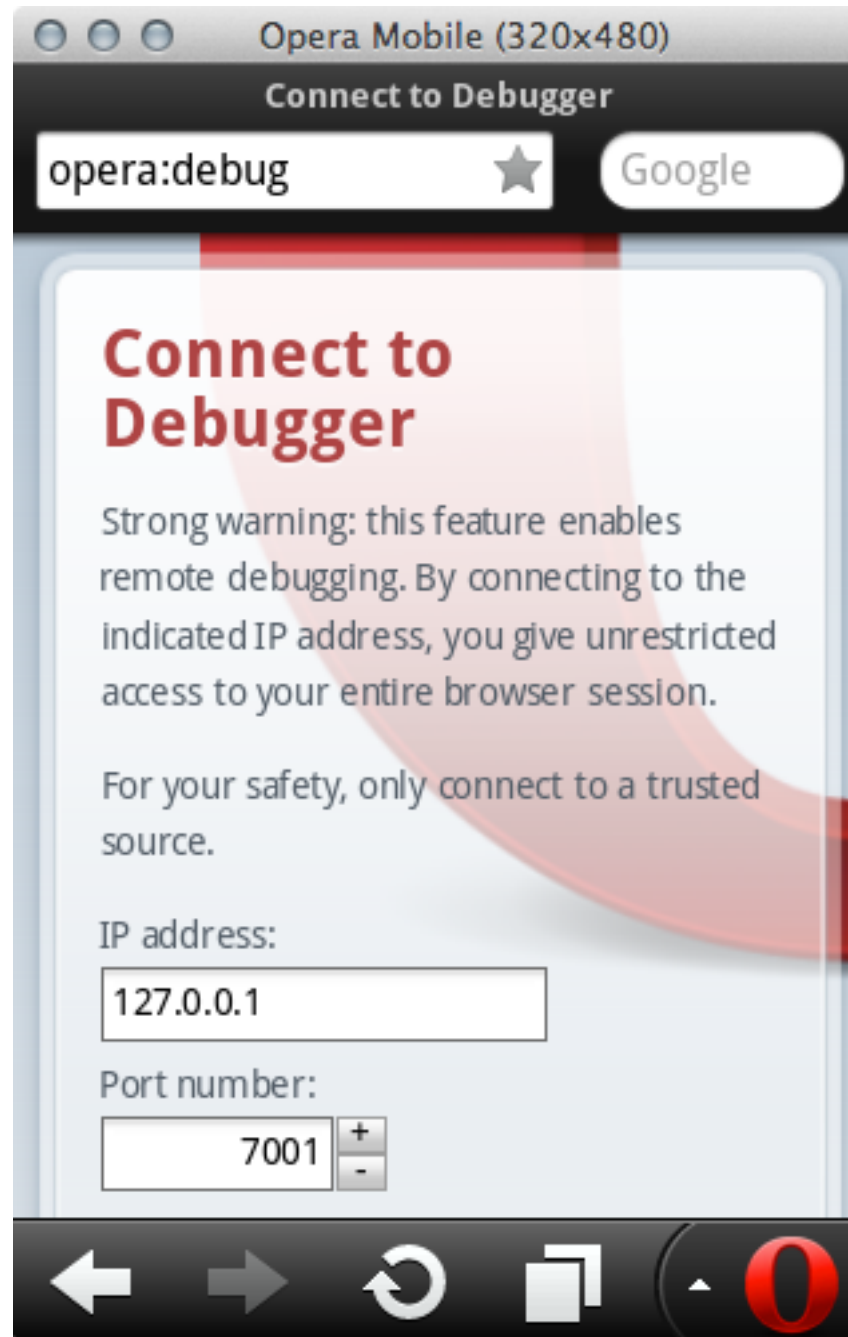

TAKE CONTROL — YOUR WEB, YOUR LOGO

AN HTML5 LOGO

Latest stable release with recent enhancements

By Patrick H. Lauke (patrickhlauke). Friday, March 16, 2012 1:14:53 PM

Today's release on the stable branch of Opera Dragonfly includes many of the recent enhancements and fixes from our experimental builds.

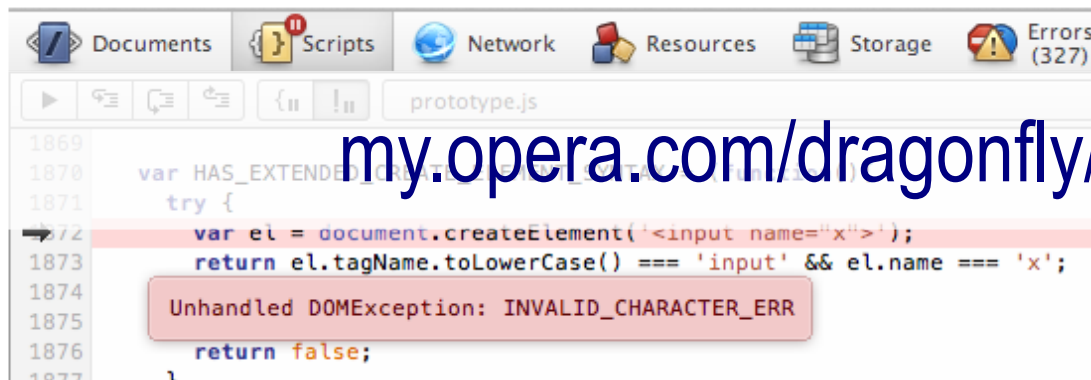

Apart from a boatload of small tweaks and bug fixes, some of the top new features and additions include:

- [CSS shorthands](#) in the Style Inspector, which removes a lot of the redundancy of having all expanded and default styles being listed

```
body {
    border: 1px solid #FF0000;
}
```

[html.html:2](#)

- [JavaScript runtime errors](#) shown directly as a tooltip in the Script panel, rather than just in the Error panel

my.opera.com/dragonfly/blog

Next builds

<https://dragonfly.opera.com/app/experi>

<https://dragonfly.opera.com/app/cuttin>

<https://dragonfly.opera.com/app/>

New features are added to the experimental branch as soon as they're ready. Once tested, they move to the cutting-edge branch as a release candidate. Unless any problems arise, they are then promoted to the stable branch.

To switch to these builds, enter the relevant URL in [opera:config#DeveloperTools](#), save the configuration change and (re-)open Opera Dragonfly.

Preview builds

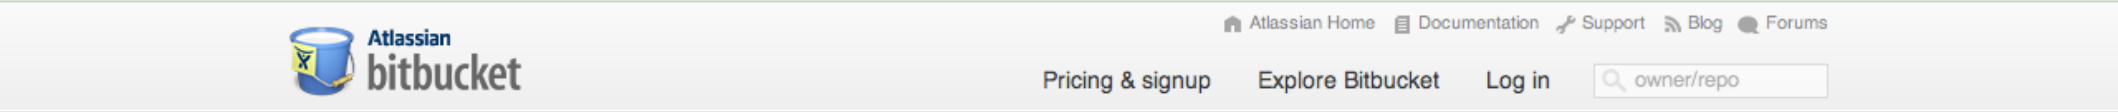

<https://dragonfly.opera.com/app/profil>

This is a special build of Opera Dragonfly - the functionality has not yet been merged with either the experimental or cutting-edge builds. Only the Profiler tab is available. Read the [Style profiler preview post](#) for more details.

Useful resources

⬆ We're planning a brief scheduled maintenance window, Wednesday March 7th, 18:30 GMT.
